

AMD AI HACKATHON • ENTERPRISE AI TRACK

BizTwin

AI Business Digital Twin

Ask your business what happens next — before it happens.

Upload

Twin

Ask

Decide

WHAT WE'LL COVER

Five minutes, start to finish

The problem

Why SMB decisions are made blind

01

The solution

What BizTwin actually is

02

How it works

Upload → twin → ask → simulate → explain

03

The product

A look at the experience

04

Why it's trustworthy

AI explains; a real engine calculates

05

Why AMD

Where and how it runs

06

Market & vision

Who it's for, and where it goes next

07

THE PROBLEM

Big decisions, made on gut feeling

- Operational data exists — sales, inventory, supplier costs, payroll — but it sits scattered across spreadsheets.
- Owners answer big questions — switch suppliers? hire staff? drop a product? — from instinct, not analysis.
- Enterprise BI platforms are too expensive and too technical for a business with no data team.

WHAT IT COSTS

The price of flying blind

Inventory imbalance

Overstocking ties up cash;
understocking loses sales.

Common, quiet, compounding.

Poor supplier calls

Price hikes absorbed blindly, quietly
eating margin.

Common, quiet, compounding.

Costly hiring

New headcount added without
modeling the payback.

Common, quiet, compounding.

Hours lost to Excel

Manual analysis instead of running
the business.

Common, quiet, compounding.

INTRODUCING

BizTwin

An AI-powered Business Digital Twin that lets you simulate business decisions in plain English — using your own data.

Upload

Ask

Decide

Three words. One product philosophy: separate what the AI understands from what the engine calculates.

HOW IT WORKS

From spreadsheet to simulated decision

PRODUCT WALKTHROUGH

What the owner sees, step by step

1 • Dashboard at a glance

2 • Ask in plain English

3 • Before vs. after, explained

CORE FEATURES

A small, complete feature set

Data Upload

CSV / Excel ingestion for sales, inventory, suppliers, employees

AI Assistant

Natural language interface to the digital twin

Dashboard

Revenue, profit, inventory, and KPIs at a glance

Scenario Simulation

Supplier, hiring, and product-discontinuation models

Before vs. After

Visual comparison for every simulated decision

Digital Twin

One structured model unifying all business data

Language understands. Math never lies.

AI Layer

- Understands the question
- Identifies the right scenario
- Explains results in plain language

Simulation Engine

- Runs deterministic math
- Uses the business's real uploaded data
- Produces every financial number

“Raise price 15%?”

Intent: Supplier Scenario

Margin 18.4% → 14.1%

“Absorb 40%, pass 60%”

The AI never invents a number — it interprets intent and explains outcomes computed from real data.

WHY AMD

Deployed on AMD infrastructure

AMD

Fireworks AI

- AMD Developer Cloud powers the build and deployment environment
- AMD GPU infrastructure runs the workload behind the digital twin
- Fireworks AI provided LLM inference during development

Data In

AMD Compute

AI Explanation

Enterprise AI, SMB price point

Running the twin and simulation workload on AMD-powered infrastructure shows that enterprise-grade decision support can be delivered efficiently — without enterprise costs.

Built for the hackathon's Enterprise AI on AMD track.

WHO IT'S FOR

**Millions of businesses run on spreadsheets.
None of them have a data team.**

Retail stores

Electronics retailers

Grocery stores

Clothing businesses

Wholesalers

Small manufacturers

Local distributors

7

target segments

0

dedicated analysts needed

1

conversation to a decision

What owners actually get back

Lower decision risk

Test the outcome before spending real money

Time back

Minutes to an answer instead of hours in Excel

Financial clarity

See the consequence, not just the transaction

No new hires needed

Analyst-grade insight without an analyst

Better planning

Model hiring, sourcing, and product decisions

Accessible AI

No dashboards, filters, or SQL to learn

Reporting shows the past. BizTwin tests the future.

Traditional BI

Historical dashboards and reports. Shows what already happened — no way to test a decision first.

BizTwin

Digital twin + simulation + conversational AI. Test the decision before you make it.

“Make advanced business intelligence as accessible as a conversation.”

Every small business should be able to ask ‘what if’ about its own operations — and trust the answer.

Beyond the hackathon build

Integrations

- Shopify
- QuickBooks
- ERP systems
- Real-time inventory sync

Smarter intelligence

- Sales forecasting
- Demand prediction (ML)
- Supplier recommendations
- Financial forecasting

Scale & access

- Multi-branch support
- Mobile application
- Multi-user collaboration
- Automated reporting

BizTwin

Ask your business what happens next — before it happens.
